11. Device Compatibility
12. Troubleshooting
13. Financial Disclaimer

was built around a single observation: most people have no single place that shows them the full picture of their financial life. Banking apps lock your data. Budgeting tools require subscriptions. Spreadsheets are powerful but fragile and require expertise to maintain.

ATLAS is a self-contained HTML file that requires nothing — no installation, no account, no internet. It answers five questions that most people search for separately:

✓ COMPLETE PRIVACY

ATLAS makes **zero network requests**. Every number you enter stays exclusively in your browser's localStorage. There is no backend, no server, no analytics, and no way for anyone — including the developer — to access your data.

ATLAS requires no installation. Save one file, open it, start using it.

Save `index.html` to your computer, USB drive, or cloud storage folder (Google Drive, Dropbox, iCloud, etc.).

Open Notepad → paste the source code → set "Save as type" to `All Files (*.*)` → type `index.html` → Save. The `.html` extension is required. Without it the file will open as plain text.

Open TextEdit → go to → paste the code → save as `index.html`.

Double-click `index.html`. It opens in your default browser. The app loads instantly with no loading screen — all logic is local.

Send the file to your phone via email, AirDrop, Google Drive, or USB cable. Open your file manager → tap `index.html` → choose "Open in Safari" or "Open in Chrome". The app runs fully in the mobile browser.

The quickest way to see ATLAS's value is to add all your recurring subscriptions first. Most users are surprised by their total monthly burn within the first 5 minutes.

⚠ DATA IS BROWSER-SPECIFIC

`localStorage` is tied to the specific browser and device you use. If you open `index.html` in Chrome and then in Firefox, each will have its own separate data store. Use the `Export` function to create a backup and transfer data between browsers or devices.

The **Health** tab is your financial command center. It aggregates data from all other modules into a single view.

ELEMENT	WHAT IT SHOWS	DATA SOURCE
	0–100 score in the header. Color-coded: green (good), amber (fair), red (at risk).	Calculated from all modules
	Total monthly subscription cost across all billing cycles	Subscriptions tab
	Months your savings would last without income	Runway tab inputs
	Total assets minus total liabilities	Net Worth tab
	Bar chart of monthly spend by category	Subscriptions tab
	Next 3 deadlines within 90 days	Deadlines tab
	Top 3 savings goals with progress bars	Goals tab

The **Health** below the stats grid shows either a green confirmation (health is good) or a list of specific issues needing attention — drawn directly from the health score calculation engine.

The **Subscriptions** tab tracks every recurring charge. The most common financial drain that people underestimate — subscription costs compound silently across months and years. ATLAS makes the total impossible to ignore.

click + **Add** and fill in:

Field	Description	Example
Service Name	The name of the service	Netflix, Adobe CC, Gym
Cost	Amount charged per billing period	15.99
Billing Cycle	How often you're charged	Monthly / Quarterly / Bi-annual / Annual
Category	Type of subscription	Streaming / Software / Health / Finance / Other
ROI Rating	How much value you get (1–5★)	5★ Essential · 1★ Should cancel
Notes	Optional note	Family plan, expires March

ATLAS converts all costs to a monthly equivalent automatically. A \$120/year plan shows as \$10/month. This makes direct comparison between monthly and annual plans accurate.

After adding a subscription, tap any star to rate its value to you. Subscriptions rated 1–2★ are flagged as "Low ROI" in the stats grid and considered candidates for cancellation. This is a personal judgment tool, not an automatic filter.

// TIP - ANNUAL COST SHOCK

Switch to the "Annual Cost by Category" section at the bottom of the Subs tab. Most people find the annual total significantly higher than expected — this is the most motivating number in the entire application.

at the top of the list let you view subscriptions by type to audit specific areas (e.g., all streaming services at once).

The Runway tab answers the most important financial resilience question: if my income stopped today, how long could I survive on my current savings?

FIELD	WHAT TO ENTER
Total Savings	Your full emergency fund plus accessible liquid savings (not locked investments)
Monthly Net Income	What you actually receive after tax. Used for the surplus/deficit calculation only — does not affect runway.
Monthly Rent / Mortgage	Your full housing cost including any fees
Monthly Food	Groceries plus regular dining — be realistic
Monthly Transport	Car payment, fuel, insurance, public transport, or combined
Other Monthly Expenses	Utilities, phone, miscellaneous regular expenses

// NOTE ON SUBSCRIPTIONS

Your subscription costs from the Subs tab are automatically included in the runway calculation. You do not need to add them to "Other Expenses" — doing so would double-count them.

are calculated automatically:

SCENARIO	CALCULATION BASIS
	All expenses as entered, including all subscriptions
	Removes 40% of subscription costs — models cancelling unused services

Rent + food + transport only. Everything else removed.

Rent + food only. The absolute floor.

Click [here](#) to persist your inputs. The runway calculation updates live as you type — you see the impact of each change immediately.

⚠ EMERGENCY FUND BENCHMARK

Financial planning professionals generally recommend a 3–6 month emergency fund as a minimum. ATLAS colors your runway score accordingly: green (6+ months), amber (3–6 months), red (under 3 months).

// 06

The [Net Worth](#) tab calculates your real financial position: everything you own minus everything you owe. Net worth is the single most honest metric of financial health — more telling than income alone.

— things you own with positive value:

Savings accounts · Investment portfolios · Pension / 401k / ISA · Real estate equity · Vehicles (resale value) · Valuables (jewelry, equipment) · Cash

— amounts you owe:

Mortgage balance · Car loans · Student loans · Credit card balances · Personal loans · Any other debts

Every time you add or update an asset or liability, ATLAS [calculates your net worth](#) for the current date. After multiple updates over time, the [Runway](#) shows your trajectory — whether your net worth is growing or shrinking month over month.

The history stores up to 24 data points (one per date). The chart line is green when net worth is positive, red when negative.

// TIP - VEHICLE VALUE

For vehicles, enter the current market resale value (not what you paid). If you have a car loan, enter the loan balance as a liability and the current value as an asset. The difference is your equity in the vehicle.

// 07

The **Deadlines** tab prevents the silent financial and administrative penalties that come from forgetting expiry dates. These range from minor inconveniences to serious consequences:

 DOCUMENT Passport, driver's license, national ID, work permit, visa.	 INSURANCE Car, health, home, life, travel insurance renewal dates.	 CONTRACT Lease agreements, employment contracts, service agreements.
 TAX Tax filing deadlines, estimated payment due dates.	 MEDICAL Annual check-up reminders, prescription renewals.	 SUBSCRIPTION Free trial end dates, annual renewal dates for services.

ATLAS calculates the number of days until each deadline and assigns a visual status automatically.

DAYS REMAINING	COLOR	BADGE	DASHBOARD ALERT
0-14 days	Red panel	Urgent	Always shown in Overview

DAYS REMAINING	COLOR	BADGE	DASHBOARD ALERT
15–30 days	Amber panel	Soon	Shown in Overview if top 3
31–90 days	Normal	OK	Shown in Overview if top 3
Passed	Normal	Passed	Not shown in Overview

A `Days Remaining` appears at the top of the Deadlines tab whenever any item is expiring within 30 days, listing them all clearly.

// 08

The `Goal` tab turns abstract financial targets into trackable, visual progress. Set a goal name, target amount, current savings, and an optional deadline date.

FIELD	DESCRIPTION	EXAMPLE
Goal Name	What you're saving for	Emergency fund, Vacation, Car, House deposit
Target Amount	The total you need to reach	10,000
Saved So Far	What you currently have set aside	3,500
Target Date	Optional deadline — enables monthly calculation	2025-12-01

When a `Target Date` is set, ATLAS automatically calculates how much you need to save each month to reach the goal on time: $(\text{target} - \text{saved}) \div \text{months remaining}$. This figure appears below the goal name.

Use the `Update Savings` button to enter your current savings amount whenever it changes. Goals are color-coded: blue (starting out), amber (past halfway), green (nearly there or complete ✓).

✓ SUGGESTED GOAL ORDER

Financial planners typically recommend this priority: 1. Emergency fund (3–6 months of expenses) · 2. High-interest debt elimination · 3. Short-term goals (vacation, car) · 4. Long-term goals (property, retirement). ATLAS lets you track all of them simultaneously.

// 09

The **Health Score** (shown in the header) is a 0–100 composite score calculated from your data across all modules. It updates automatically whenever any data changes.

FACTOR	IMPACT	DETAILS
Emergency fund	+20 / +10 / -20	6+ months: +20 · 3–6 months: +10 · Under 1 month: -20
Debt	+5 / -10	Subs > 20% of income: -10 · Subs < 5% of income: +5
Net worth	+10 / -15	Positive net worth: +10 · Negative net worth: -15
Goals	+5 / +5	Any goals set: +5 · 50%+ of goals past halfway: +5
	50	Starting value before factors are applied

0–24	25–44	45–64	65–79	80–100
CRITICAL	AT RISK	FAIR	GOOD	EXCELLENT
Red	Red	Amber	Green	Green

The health score is designed to be a directional indicator, not a precise financial measurement. A score of 50 with all data entered means there are identifiable

improvement opportunities. A score of 80+ means your key financial metrics are aligned.

// 10

ATLAS stores all data in your browser's `localStorage` — a storage area that persists between browser sessions but is specific to each browser on each device.

In Settings (if included), or use `Act.export()` from the browser console. The export generates a `atlas_backup-[date].json` file containing all subscriptions, runway data, assets, liabilities, deadlines, goals, and net worth history.

KEY	CONTENTS
<code>atlas_v1_subs</code>	All subscription records
<code>atlas_v1_rw</code>	Runway input values (savings, expenses)
<code>atlas_v1_assets</code>	All asset records
<code>atlas_v1_liabs</code>	All liability records
<code>atlas_v1_dls</code>	All deadline records
<code>atlas_v1_goals</code>	All savings goal records
<code>atlas_v1_nwh</code>	Net worth history snapshots

⚠️ CLEARING BROWSER DATA

If you clear your browser's cookies and site data (or use a private/incognito window), all ATLAS data will be lost. Export a backup regularly if your data is important to you. Private/incognito windows do not persist `localStorage` between sessions.

No data ever leaves your device. There is no server, no analytics, no telemetry. The HTML file has no external resource references — it functions identically with no internet connection.

// 11

WINDOWS Chrome, Edge, Firefox, Opera, Brave	MACOS Safari, Chrome, Firefox, Arc, Opera	LINUX Chrome, Firefox, Chromium, Brave	IOS / IPADOS Safari, Chrome, Firefox, Edge
ANDROID Chrome, Firefox, Samsung Internet	CHROMEOS Chrome (built-in), Brave		

✗ INTERNET EXPLORER – NOT SUPPORTED

Internet Explorer does not support ES6 JavaScript or modern CSS. ATLAS requires a browser released after 2017. All other browsers are fully compatible.

// 12

ISSUE	CAUSE	SOLUTION
App opens but shows no data	First use, or data was cleared	Start adding your data. All entries are auto-saved.
Data disappeared after browser update	Browser cleared localStorage during update	Restore from a JSON backup export. Create regular exports as backups.
Data not showing on another device	localStorage is device-specific	Export from old device, transfer file, import on new device.

ISSUE	CAUSE	SOLUTION
Charts not rendering on mobile	Canvas width before layout settles	Switch to another tab and back — the canvas redraws on tab activation.
File opens as plain text	Saved with .txt extension	Rename to <code>index.html</code> or resave from Notepad with All Files type selected.
Subscription cost not updating in dashboard	Billing cycle mismatch	Check the billing cycle field — all costs are normalized to monthly equivalents.
Health score stuck at —	No data entered yet	Add at least one subscription or fill in the runway fields to activate scoring.

// 13

✗ NOT FINANCIAL ADVICE

ATLAS is a personal organization tool only. The calculations, projections, health scores, and recommendations generated by this application are mathematical estimates based solely on data entered by the user.

ATLAS does not constitute financial advice, investment advice, tax advice, or any form of professional financial guidance. All figures shown are estimates and approximations. Actual financial outcomes depend on many factors not modeled by this application.

Before making significant financial decisions — including changes to savings strategy, debt repayment, insurance, or investments — consult a qualified and licensed financial professional in your jurisdiction.

Full terms of use and limitations of liability are contained in [our Terms of Use](#).
